

Title: Consultant (Business Analysis)

Location: Winnipeg

Key Responsibilities:

- Liaise with business stakeholders to elicit, identify and document business requirements;
- Perform analysis on existing applications to identify and document system requirements and gaps;
- Perform analysis of systems requirements and develop various design components (like prototypes, use case models, class models, data models, batch specifications and user interface specifications);
- Participate in peer reviews to review documentation and ensure it meets expected quality, completeness, and appropriate detail level;
- Participate in design discussions with system architects where appropriate;
- Lead Joint Application Development ("JAD") sessions with software developers and software quality assurance specialists to communicate the system requirements;
- Develop user acceptance criteria and contribute to quality assurance strategies;
- Assist with documenting test plans, test cases, and to create and manage test data;
- Provide input and participate in conducting training and awareness of deliverables;
- Provide support and guidance to software developers and software quality assurance specialists;
- Maintain and keep requirements documentation up to date;
- Facilitate integration, system, and performance/load testing.

Mandatory Qualifications, Skills and Experience:

- Minimum of ten (10) years of experience in business/system analysis or software architecture with responsibility for requirements, analysis, design, and quality assurance;
- Knowledge of business enterprise applications in a corporate environment;
- Good understanding on how technological solutions can support business processes;
- Minimum of two (2) years of hands-on experience with data conversion;
- Experience in database design and modelling;
- Knowledge of structured query language (SQL) in relational database management systems (RDBMS);
- Strong technical knowledge and ability to communicate and understand technical concepts;
- Good time management skills and able to handle multiple tasks and priorities;
- Ability to lead or guide a team of software developers and quality assurance specialists;
- Experience analyzing and designing the integration of two (2) or more applications or systems; and
- Ability to perform work according to the documented standards, procedures, policies, and practices.

Nice to Have Qualifications, Skills and Experience:

- Professional Designations/Certifications in Business Analysis and Change Management;
- Experience working with claims management systems;
- Knowledge of Java or ability to read Java code, preferably in a J2EE environment;
- Knowledge of Delphi programming;
- Knowledge of unified modelling language (UML) and/or experience working on projects using UML;
- Knowledge of IBM Rational tools, specifically RSA, DOORS and RTC.
